PROFESSIONAL PROFILE

Frontend Developer specializing in React with 4+ years of experience combining freelance and industry work. At DXC Technology, I have contributed to the creation and evolution of a corporate Design System: developing components with React and TypeScript, collaboratively defining component APIs, implementing functional and visual tests, and reviewing Pull Requests. In parallel, I have contributed to the development and maintenance of internal platform applications, integrating chatbots via WebSockets and helping build an MCP server for our Design System.

As a freelancer, I developed end-to-end projects for national and international clients (in English), ranging from corporate websites to applications with dashboards, authentication, user management, and integration with in-house APIs (Node.js) and AI services. Self-driven, communicative, and used to delivering results in fully remote environments.

PROFESSIONAL EXPERIENCE

Frontend Developer · DXC Technology

2025 – Present | 100% Remote

- Development and maintenance of a corporate Design System: building reusable components with React and TypeScript, agreeing on their API in technical sessions with the team.
- Review of teammates' Pull Requests, ensuring visual consistency, accessibility, and best practices before every merge.
- Development of internal platform applications starting from Figma designs, following a peer-review cycle (design → development → code review → merge).
- Development of a chatbot using WebSockets.
- Development of an in-house MCP server.
- Joint technical decision-making in a distributed, 100% remote environment with agile practices.

Frontend Developer & Fullstack · Freelance / Self-employed

January 2022 – December 2024 | 100% Remote

- End-to-end development of projects for national and international clients (some in English): business websites, dashboards, and complex web applications.
- Creation of a proprietary JavaScript library for sending emails from the browser, with a statistics dashboard and documentation site — independently published and maintained project.
- Built applications with authentication, user management, and full CRUD functionality, with a custom REST backend in Node.js (Express) and integration with AI APIs.
- End-to-end, independent project management: budgeting, planning, development, delivery, and client support.

TECHNICAL STACK

Core: React · TypeScript · JavaScript (ES2024) · Next.js

Styling: Tailwind CSS · Styled Components · CSS Modules · Responsive Design

State: Zustand · TanStack Query · Context API

Testing: Jest · React Testing Library · Vitest · Cypress

Tools: Git · GitHub · GitHub Actions (CI/CD) · Figma · Vite

Backend: Node.js · Express · REST APIs · Django (basic)

Other: Design Systems · Accessibility (a11y) · MCPs · WebSockets

EDUCATION

Master's Degree in Full Stack Web Development

LANGUAGES

Spanish: Native **English:** B2 Certified · Daily professional use

FEATURED PROJECT

JS Library for Sending Emails + Statistics Dashboard

Published JavaScript library for sending emails from the browser, with its own documentation site and a dashboard for tracking sending statistics (open rate, deliveries, errors). Project conceived, designed, and developed entirely independently.

Stack: JavaScript · React · Node.js · Express
